

Share your questions about the insects that you observed with us: insects@firsthandlearning.org

Use this mini journal to help you understand how insects walk by making your own observations and drawings.

FIRST HAND LEARNING, INC.

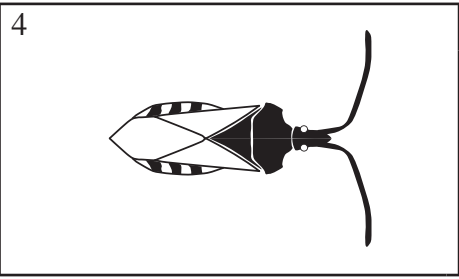

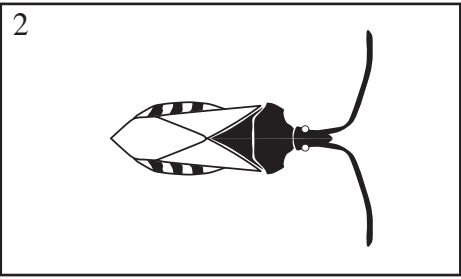

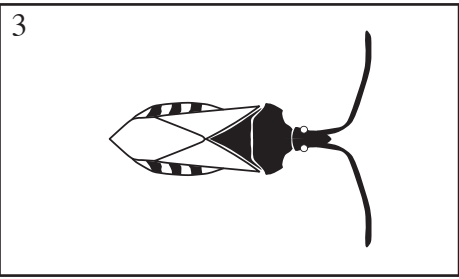

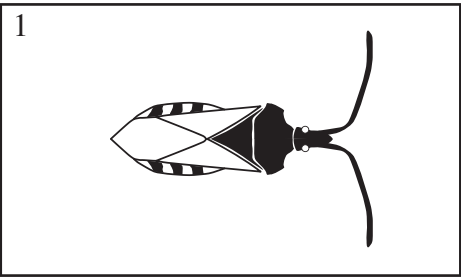

A FIRSTHAND LOOK AT INSECTS ON THE MOVE

We all know that insects have six legs BUT how do you think they move their legs when walking? Do you think the insect moves any of its legs at the same time? Show which leg or legs you think will move forward first as the bug begins its step. Draw the new leg position or positions in the next frame.

OBSERVE INDOORS

Go to www.firsthandlearning.org/insectjournal and watch a Western Conifer Seed Bug take a walk. Draw four consecutive "steps." Be sure to label the legs.

OBSERVE OUTDOORS Find Insects walking.
