

Dear Parents,

We are learning about water in our classroom. Here is a sink and float activity you can do with your child at home.

## Sink and Float

To help your child think about how objects behave in water, please help your child complete the chart in his/her journal

1. Find the 5 objects listed in your child's science journal. Predict whether they will sink or float. Then test them and record the results.
2. Now find 5 additional objects, for example, paper, food items, coins, spoons, etc. to test. List these objects in his/her journal. Make your predictions, test, and record.
3. At the conclusion of this activity, please talk with your students about what surprised him or her and what they learned. Ask them to write their comments in their science journal.
4. Return the science journal to school by: \_\_\_\_\_

Thank you.

Name: \_\_\_\_\_ Date: \_\_\_\_\_
